All models comply with the Pressure Equipment Directive PED 97/23/EC. For details, see specific product page or Armstrong PED Certificate.

Liquid Drainers

1-LDC – A See-Thru Body So You'll Know When It's Working

Benefits You Can See

Reduced maintenance

Stainless steel internals mean corrosion resistance and reduced maintenance.

Positive seating

Free-floating valve mechanism assures positive seating so it prevents air loss. There are no fixed pivots to wear or create friction, and wear points are heavily reinforced for long life.

In-line repairability

In-line connections and an O-ring seal make for quick, easy repairs without dismantling piping. Just unscrew and remove the body for maintenance.

Reduced need for cleaning

Recessed dirt pocket gives dirt a place to accumulate away from the valve seat. Valve seat is 32 mm above the dirt pocket. Compared to other ball float drain traps, the Armstrong 1-LDC reduces dirt fouling and needs less frequent cleaning.

Efficient operation

Simple ball float mechanism discharges only when liquid is present so it doesn't waste air.

An inside look

See-thru body means you can observe changing conditions as they occur. See a problem in the making – instead of having to deal with it after the fact.

Corrosion resistance

Long-lasting polysulfone body and reinforced nylon cap weigh less than 20% of cast iron liquid drain traps. Rugged polysulfone resists corrosion and provides long, trouble-free service life.

Simplified installation

Optional horizontal or vertical inlet with horizontal outlet eliminates the need for extra fittings. Makes installation in existing systems easier. Vertical inlet is 3/4" to accommodate air venting. Requires no electricity.

Note: The Armstrong 1-LDC is not recommended for extremely dirty systems or those with heavy oil carryover. The drain trap should not be used in an environment where there are high levels of ketones or chlorinated or aromatic hydrocarbons.

1-LDC – A See-Thru Body So You'll Know When It's Working

Now, you can literally see what you've been missing – the early warning signs of a drain trap or system problem. Since you'll *know* the operating condition of a drain trap, you won't waste time and money scheduling maintenance that isn't needed. In other words, you will be able to react to a condition before it becomes a problem.

A simple ball float mechanism requiring no electricity to operate, the new Armstrong 1-LDC discharges automatically *only* when liquid is present. That means no air loss as with timed devices, which open even when liquid is not present.

Moisture in a compressed air system causes a variety of problems – everything from dirt fouling and potential corrosion to water hammer. Getting the water out – automatically, reliably – builds greater efficiency into your system. In short, pay attention to your compressed air system, and you'll probably pay less to compress air.

Compare...and Save the Difference

Seeing really is believing – especially when you compare the Armstrong see-thru drain trap with cast iron units. Measure the differences in the time and money you can save with a more efficient, easier-to-maintain compressed air system. For more information or technical assistance, contact your local Armstrong Representative.

1-LDC See-Thru Liquid Drainer

For Loads to 690 kg/h...Pressures to 10 bar

Now, you can literally see what you've been missing – the early warning signs of a drain trap or system problem. Since you'll know the operating condition of a drain trap, you won't waste time and money scheduling maintenance that isn't needed. In other words, you'll be able to react to a condition before it becomes a problem.

A simple ball float mechanism needing no electricity to operate, the 1-LDC discharges automatically only when liquid is present. That means no air loss as with timed devices that open even when liquid is not present. Moisture in a compressed air system causes problems. Getting the water out – automatically, reliably – builds greater efficiency into your system.

Table LD-446-1. 1-LDC List of Materials

Name of Part	Material
Cap and Fitting	Reinforced Nylon
Body	Polysulfone*
O-Rings (Cap, Body and Fitting)	Nitrile Elastomer Compound
Float, Lever and Screws	Stainless Steel
Valve & Seat	Stainless Steel
Retainer Ring	Zinc-Plated Steel

* UV sensitive

Table LD-446-2. 1-LDC Maximum Operation Pressures and Capacities

Specific Gravity	1,0		0,95	
	Maximum Operating Pressure	Capacity	Maximum Operating Pressure	Capacity
Orifice Size	bar	kg/h	bar	kg/h
	1/8"	8,3	690	7,6

Maximum Allowable Pressure (Vessel Design)	10 bar @ 65°C
Maximum Operating Pressure	10 bar

All sizes comply with the article 3.3 of the PED (97/23/EC).

Figure LD-446-1.
Typical Drain Trap Location

Drain traps dispose of water that collects in many places in a compressed air system. Each drain trap arrangement must be considered individually.

Figure LD-446-2.

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

Inverted Bucket Drain Traps (BVS Model)

For Loads to 3 200 kg/h...Pressures to 45 bar

Armstrong inverted bucket drain traps are designed for systems where heavy oil and dirt may be encountered. The enlarged bucket vent equipped with a scrub wire (BVS) allows free flow through the bucket vent and discharge through the orifice located in the top of the trap.

BVS Model No.	Body & Cap	Valve & Seat	Bucket & Leverage System	Gasket
800, 811, 812, 813, 880, 881, 882, 883, 211, 212, 213	Cast Iron ASTM A48 Class 30	Stainless Steel	Titanium V&S (pressures higher than 38 bar)	Compressed Asbestos-free

Specific Gravity		1,00	0,95	0,90	0,85	0,80	0,75	0,70	0,65	0,60	0,55	0,50	

Note: If specific gravity falls between those shown in the chart, use the next lower gravity. For example, if specific gravity is 0,73, use 0,70 gravity data.

High Temperature Service

Maximum allowable working pressures of floats decrease at temperatures above 37,8°C. Allow for approximately:

- 10% decrease at 93,3°C
- 15% decrease at 148,9°C
- 20% decrease at 204,4°C

The float is not always the limiting factor, however. Consult with Armstrong Application Engineering if you have a high-temperature application that also requires maximum operating pressures.

Free Floating Guided Lever Drain Traps

For Loads to 22 300 kg/h...Pressures to 21 bar

Armstrong's cast iron, free-floating guided lever drain traps use the same bodies, caps, lever mechanisms, valves and seats of Armstrong inverted bucket steam traps that have been proven in years of service. Elliptical floats and high leverage make it possible to open large orifices to provide adequate capacity for drain trap size and weight.

The hemispherical valve, seat and leverage of the 1-LD, 2-LD, 3-LD and 6-LD cast iron traps are identical in design, materials and workmanship to those for saturated steam service up to 21 bar with the exception of the addition of a guidepost to assure a positive, leaktight valve closing under all conditions.

Model No.	Valve & Seat	Leverage System	Float	Body & Cap	Gasket
1-LD 2-LD 3-LD 6-LD		Stainless Steel		Cast Iron ASTM A48 Class 30	Compressed Asbestos-free

For information on special materials, consult the Armstrong Application Engineering Department.

180 Series Free Floating Lever Drain Traps

All Stainless Steel for Horizontal Installation
For pressures to 28 bar . . . Capacities to 900 kg/h

Armstrong's stainless steel, free-floating guided lever drain traps use the same bodies, caps, lever mechanisms, valves and seats as Armstrong inverted bucket steam traps that have been proven in years of service. Elliptical floats and high leverage make it possible to open large orifices to provide adequate capacity for drain trap size and weight.

The hemispherical valve, seat and leverage of the 180-LD and 181-LD stainless steel traps are identical in design, materials and workmanship to those for saturated steam service up to 39 bar, except that the 180 Series traps have a guidepost to ensure a positive, leak-tight valve closing under all conditions. The 180 Series is designed for situations where mounting a drainer close to the floor is critical. A back vent connection is required.

Table LD-453-1. 180 Series List of Materials				
Model No.	Valve & Seat	Leverage System	Float	Body & Cap
180-LD	Stainless Steel			Sealed Stainless Steel 304L

Fixed Pivot and Snap Action Drain Traps

For Loads to 1 770 kg/h...Pressures to 69 bar

Continuous Flow or On-Off Float Type Drain Traps

Armstrong's line of fixed lever and snap action drain traps includes two basic models available in cast iron and forged steel. The floats are light enough to handle light liquids.

No. 21 – A small, high-quality, economical drain trap for use on drainage jobs where dirt and oil are not encountered. It employs a single lever with a fixed pivot.

No. 21-312 – Forged steel version of the No. 21 with larger float and higher leverage.

No. 71-A – Wide open, tight-shut drain trap for use where fine dirt and grit may be present or where liquid load is light. A flat spring in the leverage system holds the valve closed until the trap body is nearly full of water. Then it snaps open, washing dirt through. When the trap body is nearly empty, the spring snaps the valve shut.

No. 71-315 – Forged steel version of No. 71-A.

Caution: Ball float drain traps are not recommended where heavy oil, sludge or considerable dirt are encountered in lines. Under these circumstances use Armstrong inverted bucket BVSU traps.

Table LD-456-1. Maximum Operating Pressures in bar for Handling Different Specific Gravity With Orifices Available in Fixed Lever and Snap Action Drain Traps (See pages LD-438 and LD-439)

Model No.	Sp. Grav.	1,00	0,95	0,90	0,85	0,80	0,75	0,70	0,65	0,60	0,55	0,50

Liquid Drainers

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

High Leverage Spring-Loaded Ball Float Type Drain Traps

For Low Flows at Pressures to 255 bar and Specific Gravity Down to 0,40

The Armstrong High Leverage Series of liquid drain traps was developed especially for draining low specific gravity fluids from gases at high pressures. They use standard Armstrong forged steel bodies with very high leverage systems and spring assist.

Because of design considerations in this drain trap, it is essential that a safety factor of at least 2 be applied to the peak liquid load for sizing purposes.

Note: Models 2313-HLS, 2316-HLS, 2413-HLS and 2415-HLS are also available with cast T-316 stainless steel body and all-stainless steel internals. Consult factory.

Do not use HLS drain traps on steam service.

Sour Gas Service
 Forged steel and stainless steel traps can be modified to resist hydrogen sulfide stress corrosion. These modifications involve annealing the float, which will reduce the maximum working pressure of the float to about half its normal value. Consult Armstrong Application Engineering for allowable working pressures.

Model No.	Float Diameter	Unbalanced Float Weight

† Available with cast 316 stainless steel body and all stainless steel internals. Consult factory.

* Other flange sizes, ratings and face-to-face dimensions are available on request.

All products are CE Marked according to the PED (97/23/EC).

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

Free Floating Lever Dual Gravity Drain Traps

For Pressures to 69 bar

Armstrong free floating lever dual gravity drain traps are identical to the units described on pages LD-451 and LD-455 except float weights are modified to make them suitable for draining water from a light liquid. If you wish to use them for draining any liquid with specific gravity other than 1,00, consult the Armstrong Application Engineering Department.

Floats for dual gravity drain traps are weighted with quenching oil which, in the unlikely possibility of float failure, may be dispersed through the system. If this is a hazard, consult the Armstrong Application Engineering Department.

Note: Armstrong can design dual gravity traps for venting light liquids from above heavier liquids. Consult the Armstrong Application Engineering Department.

Viscosity Considerations for Dual Gravity Traps

The operation of dual gravity traps depends upon a float that will sink in the light liquid and float in the heavy liquid. When the specific gravities of the two liquids are very close, the available operating forces are, therefore, also very small. Viscous fluids may impair the ability of the trap to respond to changing liquid levels.

Consult Armstrong's Application Engineering Department if your application involves fluids more viscous than 70 cs, which is approximately the viscosity of a light machine oil.

** Other flange sizes, ratings and face-to-face dimensions are available on request.

Shade indicates products that are CE Marked according to the PED (97/23/EC). All the other models comply with the Article 3.3 of the same directive.

All dimensions and weights are approximate. Use certified print for exact dimensions. Design and materials are subject to change without notice.

Ultra-Capacity Drain Traps

Capacities to 317 500 kg/h... Pressures to 31 bar

Armstrong ultra-capacity ball float drain traps are designed to meet exceptionally large capacity needs in draining water and other liquids from air or other gases under pressure.

Options. L and M Series drain traps are available with armored gauge glass with a maximum allowable pressure of 17 bar @ 218°C. When ordering, be sure to specify "Liquid Drainer" or "LD." Example, LS-series LD, 50 mm BSPT, 7/8" orifice.

M to 17 bar	1 7/8" dual orifice	17,0	17,0	17,0	17,0	-	-	-	-	-	-	-
MS For all Pressures	1 17/32" dual orifice	31,0*	31,0*	31,0*	31,0*	31,0*	-	-	-	-	-	-

* These pressures applicable only to "LS" and "MS" models.

Name of Part	Material	
	Series JD, KD, L & M	Series LS & MS
Cap & Body	JD, KD: ASTM A395 Ductil Iron L, M: ASTM A48 Class 30	ASTM A216 Grade WCB
Cap	L, LS: 304 Stainless Steel, ASTM A351 Grade CF8	
Extension*	K, M, MS: 17-4 Ph, ASTM A747 Grade CB7Cu-1	
Cap Bolting	ASTM A193 Grade B 7**	ASTM A193 Grade B 7
Cap Gaskets	Compressed Asbestos Free	
Float Mechanism	Stainless Steel	

* JD Series does not have cap extension.

** JD and KD Series - ASTM A307 Grade B.

Model	Size in mm	NPT	BSPT	SW	Flanged
JD	50	X	X	-	X
KD	50, 65, 80	X	X	-	X
L	50 - 65	X	X	-	X
M	80	X	X	-	X
LS	50 - 65	X	X	X	X
MS	80	X	X	X	X

Shade indicates products that are CE Marked according to the PED (97/23/EC). All the other models comply with the Article 3.3 of the same directive, but for "L" and "M" Series PMA is 11 bar.

Trap Series	JD & KD	L & M	LS & MS
Pipe Connections	50 - 65	50 - 65 - 80	50 - 65 - 80
"B"	332	514	508
"C"	246	375	387
"H"	348 - 373	505	508
"HH1" (PN40*)	420 - 448	574 - 580 - 585	571 - 575 - 581
"HH2" (PN40*)	420 - 548	-	-
"M"	152	287	287
"D"	75 - 90	106	106
"S"	-	95	95
"T"	-	305	305
Weight in kg (screwed & SW)	36,3 - 39,5	89	132
Weight in kg (flanged PN40*)	45 - 49	97 - 99 - 101	138 - 141 - 144
Maximum Allowable Pressure (Vessel Design)	21 bar @ 343°C	17 bar @ 232°C	31 bar @ 338°C
Maximum Operating Pressure	12 bar	17 bar	31 bar

* Other flange sizes, ratings and face-to-face dimensions are available on request.

JD, KD, L and M Series also may be used for steam service as float & thermostatic traps and as condensate controllers. Steam service capacities for all configurations are given in the steam trap section of this catalog.
